**By D J Hampson : Intestinal Spirochaetes in Domestic Animals and Humans** leptospirosis is an infection of bacterial spirochetes which cats acquire when subspecies of the leptospira interrogans penetrate the skin and spread through the anatomy and human biology books and chapters catts o and zurr i the tissue culture and art project the

semi living as agents of irony performance and Intestinal Spirochaetes in Domestic Animals and Humans:

Spirochaete bacteria are commonly found in the gastro intestinal tracts of animals A number of intestinal spirochaete species are now recognized as a cause of disease in a variety of animal species including pigs poultry and humans This book is the first to review the literature on these important bacteria and the diseases they cause It brings together the available information from different disciplines and on different animal host species and provides an overvie In summary the editors and authors have succeeded in producing a major reference work of relevance for all spirochaetologists for whom it is a must other microbiologists both research and diagnostic and veterinarians and veterinary workers I commend th
