By David D. Weaver MD : Catalog of Prenatally Diagnosed Conditions (Johns Hopkins Series in Contemporary Medicine and Public Hea) Catalog of Prenatally Diagnosed Conditions (Johns Hopkins Series in Contemporary Medicine and Public Hea):

This book is a catalog of detailed information on approximately 800 conditions that have been diagnosed prenatally. It includes the methods of detecting fetal abnormalities, the abnormal findings, and the published references in which the condition is reported. Conditions are grouped according to related disorders using a numbering system based on that developed by Victor McKusick for Mendelian Inheritance in Man. The third edition contains approximately 200. A single source of much of the information that doctors and other health care workers need in order to learn if a birth defect or genetic condition can be diagnosed prenatally. Also an excellent reference source for researchers. American Reference Books
