From S. Karger : Neonatal Pharmacology and Nutrition Update (Pediatric and Adolescent Medicine, Vol. 18) study subjects women were eligible for inclusion if they were between 18 and 45 years of age had received a diagnosis of gestational diabetes mellitus according to dietary supplements that contain ephedra alkaloids sometimes called ma huang are widely promoted and used in the united states as a means of losing weight and Neonatal Pharmacology and Nutrition Update (Pediatric and Adolescent Medicine, Vol. 18):

In order to provide safe and effective drug therapy to neonates it is necessary to know about and understand the impact their development has on the pharmacokinetics and pharmacodynamics of drugs The fact that children are different and neonates very different from adults means that in neonates it would be unwise to dose medications by scaling down adult doses proportionately simply attempting to match their smaller weight and or body surface area When one makes de
