From Ingramcontent : Pathogen-Host Interactions: Antigenic Variation v. Somatic Adaptations (Results and Problems in Cell Differentiation) evolution in organisms occurs through changes in heritable traits the inherited characteristics of an organism in humans for example eye colour is an inherited biology dictionary brought to you by the basics of biology dvd series Pathogen-Host Interactions: Antigenic Variation v. Somatic Adaptations (Results and Problems in Cell Differentiation):

This volume provides in depth reviews of model systems that exemplify the arms race in host pathogen interactions Somatic adaptations are responsible for the individualization of biological responses to the environment and the continual struggle between host immune systems and invading pathogens has given rise to corresponding processes that produce molecular variation Whether in mollusks or human beings various host somatic mechanisms have evolved independently From the Back Cover This volume provides in depth reviews of model systems that exemplify the arms race in host pathogen interactions Somatic adaptations are responsible for the individualization of biological responses to the environment and the continual st
