**From Ingramcontent : Inflammasome Signaling and Bacterial Infections (Current Topics in Microbiology and Immunology)** review article medical progress staphylococcus aureus infections franklin d lowy md n engl j med 1998; 339520 532 august 20 1998 doi 101056nejm199808203390806 the biology and underlying mechanisms of cross presentation of exogenous antigens on mhc i molecules freidrich m cruz jeff d colbert elena merino barry a Inflammasome Signaling and Bacterial Infections (Current Topics in Microbiology and Immunology):

This volume details our current understanding of the architecture and signaling capabilities of known canonical and non canonical inflammasome complexes and highlights their action in particular in response to infection with important bacterial model organisms and the corresponding disease pathologies The first chapters review new insights into the assembly and structures of inflammasome components and emphasize general strategies of up and downstream signaling eve From the Back Cover This volume details our current understanding of the architecture and signaling capabilities of known canonical and non canonical inflammasome complexes and highlights their action in particular in response to infection with important bacte
