alcoholic mothers sustain enough Prevention of Fetal Alcohol Spectrum Disorder FASD: Who is responsible? (Health Care and Disease Management):

Exposing a developing embryo or fetus to alcohol can produce life long brain damage with neurological cognitive and behavioural consequences The implications of fetal alcohol spectrum disorder for the affected individual and the family are devastating The social and economic burden to society is enormous with formidable expenditures in health care mental health care education social services and possibly correctional services Prevention has been a goal since the c This is probably the most comprehensive review of the literature on this subject available but physicians wanting guidance on the diagnosis and treatment of patients with various forms of this disease spectrum would be better served with a more clinical text
