Feeding: The Physiological Basis (Bulletin of the World Health Organization):

This volume establishes the scientific basis for addressing the many questions that surround the appropriate feeding of infants during their first year of life. Noting that adequate diet is more critical in early infancy than at any other time in life, the review considers what knowledge about infant physiology can contribute to the understanding of nutritional needs. More than 500 references to the literature are included. The evidence reviewed challenges several widely most firmly recommended. Nutrition and Health should be considered the definitive work on the subject. Nursing and Health Care About the Author World Health Organization is a Sp
