By David H. Adamkin : Nutritional Strategies for the Very Low Birthweight Infant (Cambridge Medicine (Paperback)) Nutritional Strategies for the Very Low Birthweight Infant (Cambridge Medicine (Paperback)):

The goal of nutritional management in VLBW and ELBW infants is the achievement of postnatal growth at a rate that approximates the intrauterine growth of a normal fetus at the same postconceptional age. In reality however growth lags considerably after birth although non nutritional factors are involved nutrient deficiencies are critical in explaining delayed growth. This practical clinically oriented pocketbook reviews and summarises all available clinical evidence. This easy to read practical book reviews evidence based nutritional strategies for the very low birthweight infant. A wonderful contribution to the practical literature on neonatal nutritional care.
